

Kayleen Tauhid
Aspiring Data Analyst

4801 24th Ave NE • Seattle, 98105 • kayleen.nataniatauhid@gmail.com • (206) 226-8512

Skills

Technical:

Python (NumPy, Pandas, Matplotlib, Seaborn), R, SQL, Power BI, Tableau, Microsoft Excel, MongoDB, Cassandra (NoSQL), HTML, LaTeX

Language: Indonesian, English

Education

University of Washington | Dean's List 2024-2026

Seattle, WA

Major: Applied Mathematics, Data Science | Minor: Data Science

2026

Whatcom Community College | Dean's List 2022-2024

Bellingham, WA

Associate's of Arts and Sciences, Graduated with Honors

2024

Experience

PT Industri Jamu dan Farmasi Sido Muncul Tbk

Jakarta, Indonesia

Internship

July 2025 – August 2025

- Collaborated with team to find, Clean, and transform structured datasets related to KukuBima advertising campaigns using Python (Pandas, NumPy) and SQL
- Partnered with domain experts and team members during sprint cycles to define objectives and identify constraints.
- Contributed to exploratory data analysis (EDA) and feature engineering to evaluate advertising performance and identify factors influencing campaign effectiveness
- Co-Developed interactive Power BI dashboards for stakeholders

Whatcom Community College

Bellingham, WA

Executive Vice President of Operations

January 2023 – March 2023

- Represented students in discussions with state legislators on higher education and student services
- Coordinated executive board operations, including meeting agendas, documentation, and regulatory compliance

Projects

Credit Default Prediction | [GitHub Repository](#)

Seattle, WA

University of Washington

May 2026- June 2026

- Preprocessed and engineered features from a credit default dataset with 30,000 records using Python and Scikit-learn
- Conducted exploratory data analysis (EDA) to understand the key predictors of credit default
- Developed and tuned a Logistic Regression model using feature scaling and hyperparameters to obtain an F1 score of 0.512 and an ROC-AUC of 0.740
- Compared performance against Random Forest, SVM, and Gradient Boosting

Music Trends Dashboard | [GitHub Repository](#)

Seattle, WA

University of Washington

January 2026-February 2026

- Analyzed 10,000+ songs using audio features including tempo, loudness, duration, key, and mode
- Built an interactive dashboard with dynamic filtering, time-series visualizations, and comparative distribution analysis
- Processed and aggregated music data to uncover long-term trends across musical eras
- Collaborated on the design and implementation of interactive visualizations for exploratory data analysis
